Video System Retrofit

Upon approval of the Proposal, and execution of the Service Agreement, COMMAV will install and integrate a Video Projection Screen into the existing video system within the Multipurpose Room.

The work, as installed, will consist of:

- De-Installation and Disposal of Existing Screen.
- Installation of (1) tensioned, motorized screen of the same size as Existing Screen.
- Equipment and wire appropriate for the integration of the screen with the existing video and control systems.

The Video Projection Screen is a custom product, and will take (7)-(10) days to fabricate and ship. Shipping method will be drop-shipment, by freight, to the Onalaska Public Library job site. Reception and secure storage of the unit to be provided by Onalaska Public Library.

Installation work may be carried out as early as (15) days following the execution of the Service Agreement and payment of the Initial Deposit. The installation will require (4) hours on-site to install the screen, and tune the complete system.

The system, as completed, will be commissioned with an appropriate "hands-on" training session with COMMAV staff and designated Onalaska Public Library representatives. The training session will be scheduled according to Onalaska Public Library staff and venue availability.

Line voltage electrical work deemed necessary to exchange the new screen motor with existing screen motor is included in the scope of this proposal, and will be provided by Commercial AV Systems. Additional Line voltage electrical work requested must be provided by Onalaska Public Library, or a subcontract for a licensed electrician added to the project via the standard change-order process.

Any cabinetry or finish carpentry deemed necessary to perform the installation falls outside the scope of this proposal, and must be provided by Onalaska Public Library; or a subcontract for a finish carpenter added to the project via the standard change-order process.

Attachments: Onalaska Library - Chris - 02041902 - Options.docx

Thanks for the info Chris. I have attached a quote for your review. I have provided two options of essentially the same screen. The more expensive one is similar to what you have now in the fact that it is tensioned and has the curved look to it. In the past they did have issues over time of them becoming sticky due to the glue and adhesive they used for the tab tension. This issue has been resolved in recent years however.

The second less expensive option is the same screen just not tab tensioned, so the sides don't have the tabs or the curvature to it. The main advantage of tab tension is that it keeps the screen material nice and tight over the years, however does come at a premium.

Long story short for aesthetics the more expensive option will match your picture, the lesser option will be the same size and housing just the sides of the screen will look slightly different as there wont be the extra black material that the tabs are on. We don't spec too many tab tensioned screens ourselves.

Hope this all makes sense. Let me know if you have any further questions. Labor would be roughly \$1800, however since an electrician has to touch it for the power it is usually more cost effective if they just hang it at the same time, two birds one stone.

Thanks,

Jay Shearer

Subject: RE: Onalaska Library Automatic Screen

Wall mounted. And I'm sorry! I even had a picture to send and forgot! We have a large room that can be divided and both sides have these remote controlled screens so we're hoping they can be relatively close in size/look for when we use the full space and both screens!
